Chemical Engineering Advising Handbook

This Handbook summarizes the academic requirements of the Chemical Engineering Curriculum following the removal of the “Options” and applies to students who entered the CHE major in Summer 2018 or later (typically, students who started at PSU in Fall 2016 or later). Students who entered the major before Summer 2018 still have the “Options” available to them. This handbook also applies to students following the “General Option.” Students following options other than General should consult the previous handbook for details. Students who started in Summer 2015 or later follow the curriculum detailed in this handbook, while a minority of CHE students remain who started before summer 2015 and should follow the “Old” curriculum.

Designed to meet the needs of our students and faculty for decades to come, the new Chemical Engineering and Biomedical Engineering Building will be located on the site of the previous Fenske Lab, and is scheduled to open in Winter 2018.
Curriculum in this handbook directly applies to students who enter the CHE major in Summer 2018 or later

Introduction to the Department

The new chemical engineering and biomedical engineering building will open in late Fall 2018, with our department moving into the building during early 2019. It is located where Fenske Building used to be. Until the new building is ready, the chemical engineering department is spread across two temporary locations, Greenberg (on Hastings Rd) and the basement of Thomas Building. Faculty and staff offices and labs will be moving into the new building between January and early summer 2019, with the first classes held in the new building in Fall 2019.

Undergraduate Office: Rachel Smith, Jennie Gibson, 7 Thomas, 814-865-2574
CH E 480W Lab: 18 Thomas
CH E Computer Labs: 9, 16 and 17 Thomas
IT Support: Sarah Stone, 8D Thomas, 814-863-9634
AIChe Office: 5 Thomas

ChE Faculty
MONTY ALGER, 101 HOSLER BUILDING, mxa50@psu.edu, 814-865-0269
ANTONIOS ARMAOU, 8C Thomas Building, armaou@engr.psu.edu, 814-865-5316
ALI BORHAN, 8A Thomas Building, borhan@psu.edu, 814-865-7847
WAYNE CURTIS, 45 Greenberg, wrc2@psu.edu, 814-863-4805
RONALD DANNER, 47 Greenberg, pd@psu.edu, 814-863-4814
KRISTEN FICHTHORN, 37 Greenberg, fichthorn@psu.edu, 814-863-4807
ENRIQUE GOMEZ, 404 Steidle Building, edg12@psu.edu, 814-867-3428
ESTHER GOMEZ, 44 Greenberg, ewg10@psu.edu, 814-867-4732
MECHTELD HILLSLEY, 8F Thomas Building, mmv100@psu.edu, 814-863-9356
MICHAEL JANIK, 51 Greenberg, mjj13@psu.edu, 814-863-9366

ANDREW ZYDNEY, 41 Greenberg, alz3@psu.edu, 814-863-7113
Academic Requirements

The CHE major requires 133 credits for graduation. These are listed below.

GENERAL EDUCATION & OTHER GENERAL REQUIREMENTS (34 credits)
- EDSGN 100 Introduction to Engineering Design (3)
- ENGL 015 Rhetoric and Composition (3)
- ENGL 202C Effective Writing: Technical Writing (3)
- CAS 100A or B Effective Speech (3)
- First-Year Seminar (1)
- General Education “Knowledge Domains” (21 credits) that typically include:
  - GHW elective (3)
  - GA/GH/GS electives (18 credits, must include ECON 102 or 104, must include 3 credits of US and 3 credits of IL, if following “Summer 2018 Gen Eds”, must include 6 credits of “Integrative Studies”)

MATH (14 credits)
- MATH 140 Calculus With Analytic Geometry I (4)
- MATH 141 Calculus with Analytic Geometry II (4)
- MATH 231 Calculus of Several Variables (2)
- MATH 251 Ordinary and Partial Differential Equations (4)

PHYSICS (8 credits)
- PHYS 211 General Physics: Mechanics (4)
- PHYS 212 General Physics: Electricity and Magnetism (4)

CHEMISTRY AND LIFE SCIENCES (24 credits)
- CHEM 110 Chemical Principles I (3)
- CHEM 111 Experimental Chemistry I (1)
- CHEM 112 Chemical Principles II (3)
- CHEM 113 Experimental Chemistry II (1)
- CHEM 210 Organic Chemistry I (3)
- CHEM 212 Organic Chemistry II (3)
- CHEM 213 Laboratory in Organic Chemistry (2)
- CHEM 457 Experimental Physical Chemistry (2)
- B M B 251/MICRB 251 Molecular and Cell Biology I (3)

Take 3 credits of physical chemistry from the list below:
- CHEM 408 Computational Chemistry (3)
- CHEM 448 Surface Chemistry (3)
- CHEM 452 Physical Chemistry - Quantum Chemistry (3)
- CHEM 464 Chemical Kinetics and Dynamics (3)
- CHEM 466 Molecular Thermodynamics (3)

REQUIRED CHEMICAL ENGINEERING COURSES (35 credits)
- CHE 210 Introduction to Material Balances (3)
- CHE 220 Introduction to Chemical Engineering Thermodynamics (3)
- CHE 230 Computational Tools for Chemical Engineering (1)
- CHE 300 Professional Development Seminar (1)
CHE 320  Phase and Chemical Equilibria (3)
CHE 330  Process Fluid Mechanics (3)
CHE 340  Introduction to Biomolecular Engineering (3)
CHE 350  Process Heat Transfer (3)
CHE 410  Mass Transfer Operations (3)
CHE 430  Chemical Reaction Engineering (3)
CHE 452  Chemical Process Safety (3)
CHE 470  Design of Chemical Plants (3)
CHE 480W  Chemical Engineering Laboratory (3)

CHEMICAL ENGINEERING ELECTIVES (6 credits)
Take 6 credits in 400-level engineering electives from the following list:
   CHE 423  Chemical Energy Technology
   CHE 432 (F SC 432)  Petroleum Processing
   CHE 438  Bioprocess Engineering
   CHE 442 (MATSE 448)  Polymer Processing Technology
   CHE 443  Introduction to Polymer Science
   CHE 446  Transport Phenomena
   CHE 449  Bioseparations
   CHE 450  Process Dynamics and Control
   CHE 494  Research Projects in Chemical Engineering (see Note below)
   CHE 496  Independent Studies
   CHE 497  Special Topics in Chemical Engineering (see Note below)

Note on CHE 494: Students may use up to 6 credits of CH E 494 towards graduation requirements in chemical engineering. Up to 3 credits may be used as a CH E 4XX electives and another 3 credits may be used as engineering elective or professional elective.

Note on CHE 497: This is a generic course number for special topics that do not have a permanent course number. When multiple courses are offered on special topics, they will appear with numbers such as 497A, 497B etc.

MATERIALS ELECTIVE (3 credits)
Select 3 credits from the list:
   MATSE 201 Introduction to Materials Science (3)
   MATSE 202 Introduction to Polymer Materials (3)
   EGEE 455 Materials for Energy Applications (3)
   BME 444 (MATSE 404) Surfaces and the Biological Response to Materials (3)

ENGINEERING ELECTIVE (3 credits)
Select 3 credits from approved list of engineering courses. This list is rather long and can be found at the end of this handbook. Engineering electives must be courses that have a strong technology component and build from a background in mathematics and science. Please check with your advisor and submit a petition through coursesub.psu.edu for consideration before assuming that any course not on the list in
this handbook would count as an Engineering Elective. Many ENGR courses DO NOT count as Engineering Electives.

**PROFESSIONAL ELECTIVES (6 credits)**
Professional electives is a broad category of electives that give you the opportunity to enhance your portfolio of professional skills, to pursue minors, or to pursue topics of personal interest that are not covered by other elective categories. Acceptable courses must be at the 200-level or above. To have a course recorded as a Professional Elective on your record in LionPath, please submit a petition through coursesub.psu.edu.

---

**Prerequisites**
The Chemical Engineering Department generally enforces all pre-requisites for required CHE classes, removing all students who do not have the pre-requisites from the course enrollment at the end of the add/drop period at the beginning of each semester. Pre-requisite waiver requests can be completed (form available in department office), and require the signature of the course instructor and Undergraduate Program Coordinator. These waivers are only granted in exceptional conditions, such as when a student took the pre-requisite course at another university and the credits are yet to transfer.

**C Requirement**
The following courses require C for graduation in chemical engineering:

CHE 210, 220, 320, 330, 350

CHE 210 and 220 are special courses and require a minimum grade of C before you can take any CHE course that has these courses as prerequisites. Notice that CHE 210 is a prerequisite for all 300-level courses (except CHE 300); this means that a D in 210 will require you to retake 210 before you can start taking 300-level courses.

**General Scheduling Tips**

- Most students will be taking CHE 210 and 220 in the fourth semester. The prerequisites for these two classes are MATH 251 and MATH 231, respectively. You should be done with these Math courses before you take CHE 210 and 220.

- During the semester you take CHE 210 and 220, plan on a lighter credit load (~15-16 credits), especially if you are transferring from a Commonwealth Campus. It takes some effort to get used to the format and study style of chemical engineering classes and since both CHE 210 and 220 require a minimum grade of C, you should make sure you have the time to devote the required effort.

- The 300-level courses can be taken almost in any sequence. We recommend that you take CHE 320 and 330 in the fall of the junior year, then CHE 300, 350 and 340 in the spring. It is highly recommended to take CHE 330 before taking CHE 350.

- CHE 410 and 430 are prerequisites for CHE 470. A typical plan is to take 410 and 430 in the fall of the senior year, and 470 in the spring.
Curriculum in this handbook directly applies to students who enter the CHE major in Summer 2018 or later

- The chemical engineering lab, CH E480W, can be taken concurrently with CH E 410/430, therefore you can take it either in the fall or spring of the senior year. It is not recommended to take both 410 and 430 concurrently with the lab.

- All required CHE courses are offered both fall and spring, with the exception of CH E 300 (spring only) and CHE 452 (fall only). In addition, the following courses may be offered during the summer online: CHE 210, 220, 320, 350.

A sample course plan is shown on page 9. Though this is a typical plan, there are many possible progressions through the curriculum. It is your responsibility to ensure that the courses you want to take are available in the semester you plan to take them, and that all prerequisites are satisfied. Before making modifications to this plan see your advisor to make sure that everything will work as planned.
Curriculum in this handbook directly applies to students who enter the CHE major in Summer 2018 or later

**Total number of credits: 133**
Curriculum in this handbook directly applies to students who enter the CHE major in Summer 2018 or later.
Substitutions and Recording Elective Choices

All requests to make substitutions for required courses are to be submitted through the coursesub.psu.edu system. Some Professional Elective choices need to be submitted through this system to have the course recorded in LionPath as your choice as a Professional Elective. Many Professional Electives, and most Chemical Engineering and Engineering Electives are automatically moved to count towards these requirements in your LionPath record. If a course is not appearing in the correct location on your “Academic Requirements” (also known as “degree audit”) record in LionPath, you should submit a petition to have the course moved through the coursesub system.

General Education Requirements

The “General Education” requirements of Baccalaureate degrees at Penn State are most clearly conveyed at the university’s bulletin website:

http://undergraduate.bulletins.psu.edu/undergraduate/general-education/baccalaureate-degree-general-education-program/

These are not repeated here, but we provide some specific notes on General Requirements to help students adapt the general university requirements to the College of Engineering and Chemical Engineering BS.

First Year Seminar
Students must select a 1-credit freshman seminar during their first year. Students are not required to take the seminar offered by their major – any freshman seminar will satisfy the requirement. This requirement must be completed during the first year.

In some cases the FYS requirement is incorporated in certain 3-credit courses. In such case you must still provide an additional credit to satisfy the total credit requirement in CHE (133 credits). See your advisor for further information.

Knowledge Domains (GA/GH/GS/GN/GHW)
Chemical Engineering students meet the GQ (Quantification) and GN (Natural Sciences) requirements with courses otherwise already required of the major.

Generally, CHE students must take 18 credits of courses from the areas of Arts (GA), Humanities (GH) and Social & Behavioral Sciences (GS) areas and 3 credits of Health and Wellness (GHW). Generally, 6 credits are taken in each of the GA/GH/GS categories. Of these 18 credits, 3 credits must carry the designation of US (referring to contemporary US society) and different 3 credits must carry the IL designations. Students who enter PSU in Summer 2018 or later must all make sure that 6 credits of the 18 carry the Integrative label, and at least 3 credits in each category must not be Integrative.
Substitutions/exceptions to the standard allocation exist, for example, for students who take advanced foreign language classes, who chose to concentrate in one area using a 9-6-3 (or newly referred to as a “Move 3”) petition, or who participate in ROTC. Students are referred to the University Bulletin website above for more information on these exceptions, and are encouraged to contact their advisor with any questions.

The required Economics course (Econ 102 or 104) qualifies as a Social Sciences elective (GS).

**Minors of Interest to Chemical Engineering Students**

Chemical Engineering BS students can consider a wide array of Minors to add to their undergraduate curriculum. A typical PSU Minor requires 18 credits, but many Minors have some overlap with CHE such that credits can count towards both the CHE Major and a Minor. Some Minors count courses required of the CHE Major towards the Minor requirements. Courses in many Minors can be counted as Professional Electives or Engineering Electives within the CHE major, or towards General Education requirements.

The requirements of any Minor are defined by the Department in which that Minor is housed. Students are referred to the undergraduate bulletin (undergraduate.bulletins.psu.edu) and individual department websites to find more information about specific minors. For example, a “Program” search for “Chemistry Minor” will quickly bring up the requirements of the minor. With the range of minors of possible interest to CHE students, we cannot attempt to list all possibilities or the requirements of all minors here. However, some minors popular with CHE majors are listed below, along with notes regarding overlap in course content.

* This value is the minimum number of extra credits needed provided a student maximize the number of courses from the Minor that can also count towards the CHE Major, including as Professional or Engineering Electives.
Chemistry Minor
The Chemistry Minor requires many courses CHE students take for the Major, including CHE 110, 111, 112, 113, 210, 212, and 213. Completing this Minor typically requires CHE students to take 3 to 6 credits in Chemistry beyond those needed for the Major. These additional Chemistry courses can be counted as Professional Electives in the CHE major. Note that Chemistry 450 (Thermodynamics) cannot be counted towards the CHE major for anything due to the overlap in material with CHE 320. CHE students should not take CHEM 450. Chemistry courses cannot be counted as Engineering Electives of Chemical Engineering Electives.

Mathematics Minor
The Mathematics Minor requires a number of courses CHE students take for the Major, including Math 140, 141, 231, and 251. Completing this Minor typically requires CHE students to take 12 credits of Mathematics courses beyond those needed for the Major. Up to 6 of these additional Mathematics credits can be counted towards a CHE student’s Professional Electives. Mathematics courses cannot be counted as Engineering Electives or Chemical Engineering Electives.

Environmental Engineering Minor
This minor requires 18 credits, and a number of courses CHE students take for the Major also count towards this minor, including CHEM 210, CHE 210, and CHE 330. The additional 9 credits required of this minor can be used to count towards the CHE Major as Engineering Electives or Professional Electives.

Energy Engineering Minor
The Energy Engineering Minor requires 18 credits. A number of these credits cover topics that are foundational to Chemical Engineering (material and energy balances, thermodynamics, heat and mass transfer), and CHE students are encouraged to check with the Energy and Mineral Engineering advisors as to if any CHE courses can count towards the minor. Most courses in this Minor can be counted as Engineering or Professional Electives, and FSC 432 can be counted as Chemical Engineering 4xx elective.

Materials Science and Engineering Minor
The MATSE Minor requires 18 credits. CHE students are required to take a Materials class, which can count towards 3 of these credits. 3 additional credits from the Minor can be counted as Engineering Electives, and up to 6 credits from the Minor can be counted as Professional Electives. The CHE department offers some electives that concentrate on materials science and engineering topics, and students are encouraged to discuss with a MATSE advisor whether such electives could also be used to count towards the MATSE Minor.

Nanotechnology Minor
The Nanotechnology Minor is housed in the Engineering Science and Mechanics Department. This minor requires 18 credits. The CHE 340 course can be counted towards this minor, and most courses in this minor can be counted as Engineering Electives (up to 3 credits) or Professional Electives (up to 6 credits) in the CHE major.

Polymer Science Minor
The Polymer Science Minor is housed in the Materials Science and Engineering Department. This minor requires 23 credits. 5 of these credits (CHEM 210, MATH 231) are required of the CHE major. Up to an additional 12 credits from this minor can be counted towards the CHE major as the Materials Elective, Engineering Elective, or Professional Electives. The CHE department also offers some CHE 4xx electives that concentrate on polymeric materials, and CHE students are encouraged to check with MATSE advisors if these courses can be counted towards the Polymer Science Minor.
Biochemistry and Molecular Biology
The BMB minor requires 33 to 35 credits to complete, and overlap in required courses with the CHE major include CHEM 110, CHEM 112, CHEM 210, CHEM 212, and BMB 251 (15 credits). Up to an additional 6 credits of this Minor can be counted as Professional Electives in the CHE major.

Biomedical Engineering
The Biomedical Engineering Minor requires 18-20 credits to complete. These credits include 6 credits of direct overlap with the CHE major in BMB 251 and CHE 340. CHE 438 is also an elective in this Minor, and could also be counted towards a student’s CHE 4xx requirement. An additional 9 credits from the Minor can be counted as Professional Electives (up to 6) or Engineering Electives (up to 3) in the CHE major.

Engineering Leadership Development
The ELD Minor requires 18 credits and is housed in the School of Engineering Design, Technology, and Professional Programs (SEDTAPP). Up to 6 credits from the Minor may be used by CHE students towards their Professional Electives requirement. Note that courses in this Minor are not typically approved to count as Engineering Electives.

Entrepreneurship and Innovation (ENTI) Minor
The School of Engineering Design, Technology, and Professional Programs (SEDTAPP) in the College of Engineering coordinates the Technology Cluster within the ENTI Minor. This minor requires 18 credits to complete. Up to 6 credits from the Minor may be used by CHE students towards their Professional Electives requirement. Note that courses in this Minor are not typically approved to count as Engineering Electives.

Extra-Curricular Activities

AIChE Undergraduate Student Chapter
Our department has a very active and vigorous student chapter of the American Institute of Chemical Engineers. This chapter organizes academic, social, and career oriented activities to help students integrate into the department and the profession. Activities include networking sessions with companies, outreach activities to educate K-12 students about science and engineering, intramural sports teams, a graduation celebration, and the Penn State THON fundraiser. Students can begin involvement at any time during their studies, including during their first semester at PSU. For more information, visit:

http://sites.psu.edu/aiche/

Omega Chi Epsilon (Beta Alpha Student Chapter)
Omega Chi Epsilon (OXE) is the national honor society for the Chemical Engineering field. Students become eligible for induction to the chapter following completion of 6 credits (typically, CHE 210 and CHE 220) in Chemical Engineering, and must have a 3.5 GPA or higher at the time of induction. Students are also asked to participate in service activities prior to induction. The main service activity OXE participates in is providing tutoring to students in the 2xx and 3xx CHE courses. OXE also holds luncheon meetings with faculty to learn about research and other academic issues, holds resume workshops, and participate in high school outreach. For more information, please visit:
Curriculum in this handbook directly applies to students who enter the CHE major in Summer 2018 or later

https://sites.google.com/a/psu.edu/oxe/home

CO-OPs/Internships
Chemical Engineering undergraduate students participate in paid internships (during the summer) and CO-Ops (during the academic year) with companies in the field. These experiences provide a great chance to learn about possible career paths, and build experience that helps make students competitive for job opportunities following graduation. In our 2017-2018 exit surveys, 77% of CHE majors reporting participating in a paid industrial internship or CO-OP while an undergraduate in our program. Students are encouraged to discuss career options with their advisors and CHE professors, and to attend company information sessions. Career Fairs are held in fall and spring semesters, and students are encouraged to attend these beginning during their first year to help learn about opportunities and build relationships with possible future employers. For CHE-specific questions about CO-OPs and internships, students are referred to Professor Dawn McFadden, our department’s co-op officer (dmm120@psu.edu).

Undergraduate Research
There are many opportunities in the CHE department for undergraduate students to get involved in research activities. Students pursuing honors in Chemical Engineering are typically involved in research over multiple semesters and complete a thesis. Though there are many Schreyer’s students pursuing research in the department, research is not restricted to honors students. On our 2017-2018 graduation surveys, 48% of all CHE BS students reported getting involved in research during their undergraduate careers. Students can complete research for credit (CHE 294 or CHE 494) during the school year. There are also opportunities through department endowments and National Science Foundation sponsorship to get paid to do research during the summer. To get involved in research, students are encouraged to peruse the research descriptions of faculty on our department website and contact (email, or in person) faculty that lead groups with research in an area of interest. Students should get agreement from a faculty member to perform research for credit before registering for CHE 294(H) or 494(H).
LIST OF ENGINEERING ELECTIVES

Courses listed below are approved to count as Engineering Electives within the Chemical Engineering Major. Many of these courses have enrollment controlled by the department offering the course, and the availability of seats in these courses may vary from semester to semester.

Courses outside this list with sufficient technical content can be petitioned. Such courses are expected to be at the 300-400 level and have prerequisites in Math, Physics or Chemistry as appropriate for the subject.

Co-Op credits may be petitioned as Engineering Electives. Approval is subject to review of the final Co-Op report, which is expected to demonstrate sufficient depth in the application of chemical engineering principles. Since approval is not automatic, consult with your advisor before submitting such petition.

Many of the courses in the list below require prerequisites that are outside the courses normally taken by chemical engineering students. It is the student's responsibility to ensure that he or she has the proper prerequisites for the course of their choice. For some courses, students may find they can substitute a CHE course for a pre-req required in other departments (for example, an advanced ME course might list a ME Thermodynamics pre-req, but CHE 220/320 may also be acceptable). Questions about prerequisites should be directed to the department or instructor that offers the course of interest.

**Biological Engineering**
BE 302 HEAT AND MASS TRANSPORT IN BIOLOGICAL SYSTEMS (3)
BE 303 STRUCTURAL SYSTEMS IN AGRICULTURE (3)
BE 304 ENGINEERING PROPERTIES OF FOOD AND BIOLOGICAL MATERIALS (3)
BE 305 AGRICULTURAL MEASUREMENTS AND CONTROL SYSTEMS (3)
BE 306 MACHINES FOR AGRICULTURAL AND BIOLOGICAL PROCESSING (3)
BE 307 PRINCIPLES OF SOIL AND WATER ENGINEERING (3)
BE 308 ENGINEERING ELEMENTS OF BIOCHEMISTRY AND MICROBIOLOGY (3)
BE 465 FOOD AND BIOLOGICAL PROCESS ENGINEERING (3)
BE 468 MICROBIOLOGICAL ENGINEERING (3)

**Biomedical Engineering**
BME 401 NUMERICAL SIMULATIONS IN BIOMEDICAL ENGINEERING (3)
